

AbdullahMohsin

B.Tech Software Engineering student passionate about AI, Python, React.js, Machine Learning, Embedded Systems, Software Testing, and Project Management. Skilled in problem-solving, teamwork, and designing efficient development pipelines. Experienced with AI tools like ChatGPT, Claude AI, and Lovable for development, research, and productivity. Active on GitHub with multiple repositories and projects. Quick learner focused on building practical and modern software solutions.

PROFESSIONAL EXPERIENCE

FitMe360 – Fitness Application (2022)

- Developed a fitness application focused on workout management and health tracking
- Worked on user interface design and application functionality
- Figma for UI/UX and Flutter framework and Dart programming language used
- Used programming and problem-solving skills to improve user experience

GreenGuard – Smart Aeroponic Tower System (2026)

- Developed an embedded system project for smart aeroponic farming and environmental monitoring
- Focused on automation, sensor integration, and efficient plant management
- Worked on system design, monitoring, and smart control features

DAIT – Deep Artificial Intelligence for Thrombosis Detection

- Worked on an AI-based healthcare project for thrombosis analysis and detection
- Used Machine Learning and Python concepts for research and development
- Focused on medical data processing and intelligent prediction systems

Rangoli Restaurant App

- Designed and developed a restaurant management and food ordering application
- Focused on clean UI design, menu management, and customer experience
- Worked with frontend technologies and application workflow design

Snake and Ladder Game – DSA Project

- Developed a Snake and Ladder game using Data Structures and Algorithms concepts
- Implemented game logic, player movement, and dice system using programming fundamentals
- Improved problem-solving and algorithmic thinking skills through project development

Hospital Map Tracking Application – DSA Project

- Developed a hospital navigation and tracking application using C++
- Focused on location mapping, route tracking, and patient navigation features
- Applied object-oriented programming and logical problem-solving concepts

EDUCATION

Bachelor B.Tech Software Engineering Technology

Usman Institute of Technology (UIT), Karachi

(2023-2027) – Present

Coursework includes programming, software testing, UI/UX design, and AI fundamentals.

Intermediate (Pre-Engineering)

Government Degree Boys College, Block 7, Karachi

Completed: 2021

SKILLS

Hard Skills:

- Languages/Tools: Python, C++, JavaScript, MySQL, ArduinoUno
- Libraries/Frameworks: PyQt5, Pandas, scikit-learn

Soft Skills:

- Communication & teamwork
- Problem-solving & creativity
- Quick learning & adaptability

Languages

- English (Spoken)
- Urdu (Native)
- German(Learning)
